Strut Mount | 707 | ZipTwo® | Remote Power | Strut Channel Clip

Please read instructions in their entirety before proceeding with any part of the installation. This product must be installed in accordance with the applicable installation code by a person familiar with the construction and operation of the product and the hazards involved. Consult a qualified electrician to ensure correct branch circuit rating. To prevent electric shock, disconnect all power before installing or servicing product. Rated for use in dry and damp locations only. Retain instructions for future reference.

Step 4: Install Rail
CS-00006
ZipTwo Joiner Clip

Mounting Screw
provided by others
Step 1: Install Strut to Mounting Surface

Once layout has been verified, secure strut channel to surface with screws, *both provided by others*. Make sure each strut section is leveled before making final installation. Alignment of strut channel is critical, it will determine the alignment of the entire system.

Locate ideal location for your system to bring in power and drill a corresponding hole in the strut to bring in low voltage wiring.

**NOTE:** Vode proved strut clip is designed for 1 3/8” strut.

---

Step 2: Install Power Supply

**IMPORTANT!** If system will be supplied with a brick driver, j-boxes will not be provided.

Refer to appendix for installation of remote power housing.

Feed low voltage wire harness through strut into remote power housing. Connect supplied plenum rated wire harness to pre-installed wire harness on remote power supply. Leave approximately 1” of wire harness hanging out of the strut.

**DO NOT POWER ON**
Step 3: Install Mounting Clips

Install mounting clips to Strut in desired locations. Fixtures will have two clips for rails under 48”, four clips for rails 48” and over and six clips for 96” rails. Turn the strut nut, as shown to fit into the strut. Once in place, tighten screw using 3/32” allen key.

**DO NOT** over tighten as this will deform the mounting clips.

Step 4: Install Rail

Connect rail to power before installing onto clips.

Insert back edge of fixture to clips, then carefully snap front edge onto clips. Check that fixture is securely mounted and connect to power supply.

**For multi-rail systems:**
Joiner should be installed into the first rail before installation into mounting clips. Install joiner to rails by snapping into place. Once the first rail is installed, install the next rail into mounted clips, gently pressing into joiner.

Power system **ON**.
Install Remote Brick Power Supply

**IMPORTANT!** Before any installing power supply, turn off electricity at circuit box.

**NOTE:** Vode Brick style driver mounting plate is designed to mount only to 4” Square metal j-boxes with a minimum volume of 21 cu. in.

Install j-box *(provided by others)* to desired surface using screws *(provided by others)*. Run line, ground and neutral wiring and any applicable dimming controls into j-box through knockout and secure in place, using conduit as necessary per local coding. Use wire nuts *(provided by others)* to make a secure connection between all wiring. *(The provided wire leads are 18 AWG solid core)*.

**DO NOT** power on system until instructed.

For remote power supply maximum distance or wiring questions, please consult [Vode Remote Power Guide](#).

**NOTE:** If power housing is supplied pre-wired with cord and plug and wire harness installed, skip above steps and power system when instructed by plugging system into a standard outlet.

### Max Remote Driver Distance

**Example Only**

See [Vode Remote Power Guide](#) for wiring detail.
Install Remote Linear Power Supply

**IMPORTANT!** Before installing any power supply, turn off electricity at circuit box.

Vode recommends keeping track of which lids comes with which housing, as the lid contains important installation labeling.

Using the indicated tab, remove power housing lid to access mounting points. Install power supply housing to desired surface using screws (*provided by others*). Run line, ground and neutral wiring and any applicable dimming controls into power housing through any provided knockout and secure in place, using conduit as necessary per local coding. Use wire nuts (*provided by others*) to make a secure connection between all wiring. (*The provided wire leads are 18 AWG solid core*).

**DO NOT** power on system until instructed.

For remote power supply maximum distance or other wiring questions, please consult Vode Power Guide.

**NOTE:** If power housing is supplied pre-wired with cord and plug and wire harness installed, skip above steps and power system when instructed by plugging system into a standard outlet.

Remote Driver Distance

All Vode linear remote drivers come in a 0.054" (1.4 mm) formed galvanized steel power supply housing with five (5) knockouts: (4) 1-1/8", (1) 7/8" and (1) 9/16". Power supply housing dimensions: 2 3/8" (56 mm) x 1 5/8" (33 mm) x 20 11/16" (525 mm)

Trouble Shooting Guide

My fixture will not turn on:
Check all wiring is correct and all connections are fastened properly.
If all wiring is correct, remove fixture and connect it to a known working driver. If the fixture lights up, then the problem is with the installed driver or wiring:
1) Check line voltage to driver is present.
2) Check driver wiring (see Vode Power Guide for details) and check wiring to fixture.
3) Check driver and dimming system are compatible (see Vode Power Guide and the dimmer manufacturer’s website).
If fixture still doesn't light up, check that all dimming wires are installed correctly. Reversed polarity on any driver will cause the entire system to not work, (see Vode Power Guide for wiring details).

The fixture is not dimming properly:
Check all wiring is correct and all connections are fastened properly.
Check driver wiring (see Vode Power Guide for details). Make sure driver is compatible with dimming controls (see Vode Power Guide and the dimmer manufacturer’s website).

Important Notes

- Listed to UL standards for damp location by a Nationally Recognized Testing Laboratory (NRTL) recognized by OSHA
- Power Type: Class 2 (<60v) constant current driver.
- Dimming curve is factory preset to linear. Logarithmic is available upon request. See Vode Driver Guide for specific details and wiring diagram.
- Unless specified, one driver per rail will be supplied.
- 5 Year Limited Warranty. All material and component parts manufactured by Vode are guaranteed to be free from defects of material and/or workmanship for a period of 5 years from date of sale. Product must be installed according to Vode installation instructions and accepted trade practices. Power supplies and other auxiliary equipment are not covered under Vode warranty but may be covered by separate OEM warranty.

For any help with installation or technical information, contact Vode Tech Service at 707-996-9898.
