Please read instructions in their entirety before proceeding with any part of the installation. This product must be installed in accordance with the applicable installation code by a person familiar with the construction and operation of the product and the hazards involved. Consult a qualified electrician to ensure correct branch circuit rating. To prevent electric shock, disconnect all power before installing or servicing product. Rated for use in dry and damp locations only. Retain instructions for future reference.

Parts Diagram

Ceiling-Wall Arm with Tee | 107 | BoxRail, RaceRail, WingRail | Remote Power | Zero Canopy

NOTE: Single Rail systems do not have any Continuous Mounting components.

NOTE: WingRail rail orientation is very important. Be sure wire harness connection (power) is on the right side of the rail and it is oriented as shown.

**Step 1: Install Canopy**
CAN-107-S-00
Double Zero Canopy
Double mounting parts provided
ONLY with continuous systems

**Step 2: Install Power Supply**
RBP-XX...UNV
Brick Power Supply (shown)
-or-
RLP-XX..UNV
Linear Power Supply

**Step 3: Install Arm**
AM-107-D-XX..XX-YY
Double Arm
-or-
AM-107-S-XX..XX-YY
Single Arm

**Step 4: Install Wire Harness**
WRH-MWP-XX-M-18/2-YY
2-Conductor Wire Harness
(25' Standard)

**Step 5: Install Tee**
TE-107-D-XX-YY
Double Tee
-or-
TE-107-S-XX-YY
Single Tee

**Step 6: Install Rail**
107-WG-XX..YY
107 | WingRail (shown)
-or-
107-RR-XX..YY
107 | RaceRail
-or-
107-BX-XX..YY
107 | BoxRail

4" J-Box provided by others

4" J-Box provided by others
Installation Instructions

Step 1: Install Zero Canopy

Accurate placement and alignment is critical as it will determine the alignment of the entire system. Once mudded, NO adjustability is possible.

Determine layout using center-to-center dimensions (See page 5). Zero Canopy is designed to be used with 5/8" drywall. Mount to blocking using screws (provided by others) but do not tighten. Ensure recessed portion of bracket is flush with the drywall. Re-check alignment, levelness, and tighten screws.

**NOTE:** Vode low voltage wire harness is plenum rated. Install conduit to power supply housing as needed, per local building code.

Step 2: Install Remote Power Supply

**IMPORTANT!** If system will be supplied with a brick driver, j-boxes will be not be provided.

Refer to appendix for installation of remote power housing.

Step 3: Install Arms

After drywall, place arm over mounting flanges and secure using provided screws. Screws should be on top of arm or the least visible position for ceiling mount.
Step 4: Install Wire Harness

Feed low voltage wire harness through arm and canopy into remote power housing. Power should always be brought into the right side of the fixture. Connect wire harness to power supply using Red (+) and Black (-) leads. Leave approximately 1” of wire harness hanging out of the arms.

DO NOT POWER ON

Step 5: Install Tees

Connect wire harness to jumper in the tees using quick connects, as shown below. Be sure connectors are firmly fastened. Push excess wire into the arm and insert tee into the arm. Secure tees to the arms using provided screws.
Step 6: Install Rails

Connect rail wire harness to power wire harness. Be sure connectors are firmly fastened. Push excess wire into the arm(s), insert rail hub into arms and lightly secure in place using provided screws. Ensure both hubs are aligned and rotate easily before securing. DO NOT FORCE.

POWER SYSTEM ON
Center to Center

2' Rail = 23.75" (603 mm)
3' Rail = 35.75" (908 mm)
4' Rail = 47.75" (1213 mm)
5' Rail = 59.75" (1518 mm)
6' Rail = 71.75" (1822 mm)

2' Rail = 23.75" (603 mm)
3' Rail = 35.75" (908 mm)
4' Rail = 47.75" (1213 mm)
5' Rail = 59.75" (1518 mm)
6' Rail = 71.75" (1822 mm)

2' Rail = 24" (610 mm)
3' Rail = 36" (914 mm)
4' Rail = 48" (1219 mm)
5' Rail = 60" (1524 mm)
6' Rail = 72" (1829 mm)

2' Rail = 23.75" (603 mm)
3' Rail = 35.75" (908 mm)
4' Rail = 47.75" (1213 mm)
5' Rail = 59.75" (1518 mm)
6' Rail = 71.75" (1822 mm)
Appendix

Vode provides cable tie-back support for all Wall Mount systems with arms 6" and longer to prevent sag.

**NOTE:** Install cable tie-back support AFTER securing the rest of the system.

**Step 1: Install Anchor**

Carefully unscrew anchor from cable coupler. Using supplied screw, secure anchor to wall for all single and double arms. Cables should be installed at a 45° angle.

**Step 2: Install Cable**

Insert cable into arm keyhole.

**Step 3: Secure Cable(s)**

Screw cable coupler to back plate.

**Step 4: Adjust System**

Adjust cable using cord gripper to level system. Once level, cut excess cord, leaving at least 2 mm.
Install Remote Brick Power Supply

**IMPORTANT!** Before any installing power supply, turn off electricity at circuit box.

**NOTE:** Vode Brick style driver mounting plate is designed to mount only to 4” Square metal j-boxes with a minimum volume of 21 cu. in.

Install j-box *(provided by others)* to desired surface using screws *(provided by others)*. Run line, ground and neutral wiring and any applicable dimming controls into j-box through knockout and secure in place, using conduit as necessary per local coding. Use wire nuts *(provided by others)* to make a secure connection between all wiring. *(The provided wire leads are 18 AWG solid core)*.

**DO NOT** power on system until instructed.

For remote power supply maximum distance or wiring questions, please consult Vode Remote Power Guide.

**NOTE:** If power housing is supplied pre-wired with cord and plug and wire harness installed, skip above steps and power system when instructed by plugging system into a standard outlet.

*See Vode Remote Power Guide for wiring detail.*
Install Remote Linear Power Supply

**IMPORTANT!** Before installing any power supply, turn off electricity at circuit box.

Vode recommends keeping track of which lids comes with which housing, as the lid contains important installation labeling.

Using the indicated tab, remove power housing lid to access mounting points. Install power supply housing to desired surface using screws *(provided by others)*. Run line, ground and neutral wiring and any applicable dimming controls into power housing through any provided knockout and secure in place, using conduit as necessary per local coding. Use wire nuts *(provided by others)* to make a secure connection between all wiring. *(The provided wire leads are 18 AWG solid core).*

**DO NOT** power on system until instructed.

For remote power supply maximum distance or other wiring questions, please consult Vode Power Guide.

**NOTE:** If power housing is supplied pre-wired with cord and plug and wire harness installed, skip above steps and power system when instructed by plugging system into a standard outlet.

---

Remote Driver Distance

All Vode linear remote drivers come in a 0.054” (1.4 mm) formed galvanized steel power supply housing with five (5) knockouts: (4) 1-1/8", (1) 7/8" and (1) 9/16". Power supply housing dimensions: 2 3⁄8” (56 mm) x 1 5⁄8” (33 mm) x 20 ¹¹⁄₁₆” (525 mm)

Trouble Shooting Guide

My fixture will not turn on:

Check all wiring is correct and all connections are fastened properly.

If all wiring is correct, remove fixture and connect it to a known working driver. If the fixture lights up, then the problem is with the installed driver or wiring:
1) Check line voltage to driver is present.
2) Check driver wiring (see Vode Driver Guide for details) and check wiring to fixture.
3) Check driver and dimming system are compatible (see Vode Dimmer Guide and the dimmer manufacturer's website).

If fixture still doesn't light up, check that all dimming wires are installed correctly. Reversed polarity on any driver will cause the entire system to not work, (see Vode Driver Guide for wiring details).

The fixture is not dimming properly:

Check all wiring is correct and all connections are fastened properly.

Check driver wiring (see Vode Driver Guide for details). Make sure driver is compatible with dimming controls (see Vode Dimmer Guide and the dimmer manufacturer's website).

Rail is not rotating:

DO NOT FORCE RAIL! When properly installed, rails will turn easily.

Check that both hub set screws are loose. If rail will still not turn, uninstall rail from arms, paying attention to the wire harness connection. Check that both hubs and arm tabs are rotated in the same direction.

For any help with installation or technical information, contact Vode Tech Service at 707-996-9898.

Important Notes

- Listed to UL standards for damp location by a Nationally Recognized Testing Laboratory (NRTL) recognized by OSHA
- Power Type: Class 2 (<60v) constant current driver.
- Dimming curve is factory preset to linear. Logarithmic is available upon request. See Vode Driver Guide for specific details and wiring diagram.
- Unless specified, one driver per rail will be supplied.
- 5 Year Limited Warranty. All material and component parts manufactured by Vode are guaranteed to be free from defects of material and/or workmanship for a period of 5 years from date of sale. Product must be installed according to Vode installation instructions and accepted trade practices. Power supplies and other auxiliary equipment are not covered under Vode warranty but may be covered by separate OEM warranty.
